MEMORANDUM FOR THE RECORD

SUBJECT: Transfer of Project Equipment to FOG

1. As a result of the recent decision to cut back wherever possible on the use and support of various Project Equipments, certain of these equipments are considered excess to Project Requirements. The FOG has requested that all items we consider surplus to our requirements be transferred to them since they are conducting an extensive training program and their consumption rate is high.

2. In view of the above, it is recommended that the Project transfer the following items to the FOG:

(a) Four (4) "B" configurations. These units are presently located at Hycon's Maintenance and Overhaul Facility for rework. FOG will assume the costs of rework.

(b) Spares, Test Equipment and Ground Handling Equipment peculiar to the "B" configuration and which are excess to Project requirements. Contractor is preparing a list of these items and will furnish it to the Project Depot.

(c) Spares and Test Equipment for the Mark I-A Tracking Camera. The Project has previously taken action to transfer six (6) of these Trackers to FOG. It is necessary that a prorata share of the peculiar spares and test equipment also be transferred. Contractor is preparing a list of these items and will furnish it to the Project Depot.

(d) All "C" Configurations, together with their peculiar Spares, Test Equipment and Ground Handling Equipment. Project has stopped incurring all costs as of 31 March 1958 and FOG will assume all future costs in this regard.

3. The above transfers are to be made with the understanding that if the Project has an operational requirement for any of the above items, FOG will furnish the use of such items to the Project as may be required.
